

Eslam Tarek

FULL STACK DEVELOPER

 github.com/Eslam-Tarek —  +20 109 655 8831 —  eslam.tareq.es@gmail.com —  in/eslam-tarek1

 Tanta, Egypt

Summary

Full Stack Developer skilled in system design, software architecture, and design patterns, with hands-on experience building end-to-end applications across .NET, Node.js, and Angular. Translates business requirements into scalable, maintainable systems and delivers high-quality solutions independently.

Education

9-Month Professional Diploma, ITI (MCIT)

Oct 2025 – Present

Professional Web Development and BI-infused CRM, Tanta Branch

Faculty of Engineering, Tanta University

Oct 2020 – Jul 2025

B.Sc. in Computer and Automation Control

GPA: 3.70

Professional Experience

Back End Developer - XMotion, Egypt

Nov 2024 – May 2025

- Designed scalable, modular system architectures for growing business and workflow requirements.
- Applied microservices architecture with clear service boundaries and secure auth/authorization patterns.
- Architected core ERP modules, automating key business workflows end-to-end.
- Collaborated with frontend and DevOps teams on deployment and system integration.
- **Tech Stack:** NestJS, Node.js, RabbitMQ.

Projects

EduSystem – Educational Management API

- Educational management REST API for secure user management and academic data access.
- Built with ASP.NET Core Web API using Clean Architecture (Repository/Unit of Work); implemented JWT auth via ASP.NET Core Identity, FluentValidation, AutoMapper, and Serilog.

TaskBoard – User & Task Management Web App

- Single-page app for creating, listing, and managing user tasks with a clean, card-based UI.
- Built with Angular 19 using reusable standalone components and a modular architecture for scalability.

University Management System – MVC Web App

- MVC application managing students, departments, courses, and instructors with role-based access.
- Built with ASP.NET Core MVC, EF Core, and SQL Server; applied Repository Pattern, custom middleware/filters, and Google OAuth for authentication.

Qaddemly – AI-Powered Job and Hiring Platform (Graduation Project)

- Platform simplifying job search and hiring, with AI-driven job recommendations and resume building.
- Built with Node.js, Express, TypeScript, PostgreSQL, MongoDB, Redis, and Socket.IO for real-time updates.

PetroSafe – Assessment and Certification System (Enterprise, KSA)

- Microservices platform to train and assess fuel station workers on safety and compliance standards.
- Built with NestJS and MSSQL; designed a Backend-for-Frontend (BFF) Gateway as a unified entry point, with OIDC/Active Directory integration.

Technical Skills

Languages: C#, TypeScript, JavaScript

Frontend: Angular, HTML, CSS, Bootstrap

Backend: ASP.NET Core (MVC, Web API), .NET, SignalR, Node.js, Express.js, NestJS

Databases & ORM: SQL Server, PostgreSQL, MongoDB, Redis, Entity Framework Core, TypeORM, LINQ

Architecture & Design: System Design, Design Patterns, Clean Architecture, Microservices, MVC, Repository/Unit of Work, SOLID, OOP, DSA

Authentication & Security: JWT, ASP.NET Core Identity, OAuth2, Sessions & Cookies

Tools: Git, GitHub, Postman, Swagger, Docker

Languages

Arabic: Native

English: Very Good
